

Service : Project Management

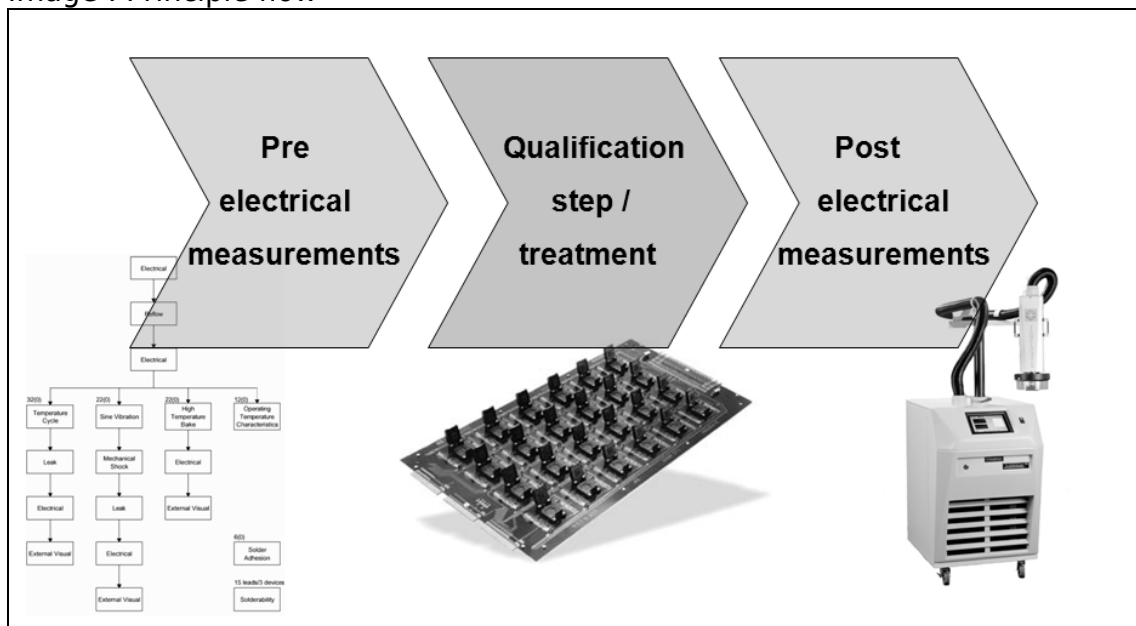

Purpose

At qualifications, screenings and failure analysis Bluetest collaborates with reliable partners who own specific know how and equipment

If you want to have a single contact person we will take over the management and control of the complex flows which take place at different locations.

As the recurring electrical measurements play a key role in the flows it is appropriate to install the project management where the measurements take place.

Bluetest Expertise

We know the sophisticated aerospace, military and automotive procedures and we know how to put them into practice.

If you don't want to perform a full AECQ qualification we can work out project specific flows with the relevant tests which prove the reliability of your product.

Long experience enables us to judge the capabilities of our partners and suppliers.

Activities
Participants

test engineer, test,
partners, suppliers
product responsible (customer site)

Requirements, Input

standards, customer specifications, list of approved suppliers

Performance

- agree general flow with customer
- adjust specific flow and schedule (project plan) with partners and suppliers

- parts-management (assort splits, numbering, control steps, receipt and shipment)

- collect test results and protocols from partners and suppliers
- collect results from electrical measurements at Bluetest

- continuing surveillance of project plan

- communication with partners, suppliers and customer.

Result, Output

Documentation, protocols, measurement data
